

# INFERNA

PET HEALTH CLASS

S4DSQU1D

Demon society has their young grow up in specialized facilities away from mainstream society. Once they become adults and are in their last year before they are allowed to leave, all of them must take a 'pet health class' which teaches them the basics of how they work and how to properly care for one.

This is Leilei! He will be your class pet for this year.

You all will be responsible for his care during this period, so pay attention to the class!!

He has been through a lot of training and, as you should know, his collar restricts a lot of his movements and most of his strength, so there's no need to be scared. He can't hurt you.

You also don't need to worry too much about accidentally hurting him. As you know, all angels have some degree of regeneration, but our Leilei is sitting at an S++ rank! It's the highest a pet can have!

Being a PFP, he is also used to people being quite rough with him too, so again, don't worry too much about him in that regard. He will be fine!

A more docile and well trained 'Public Relief Pet' is usually chosen to be the live example for the class.

Now, Leilei, open your legs.

Yes, like that. Keep them open, ok?

\*NODS\*

Uhm...teacher? Can he talk?

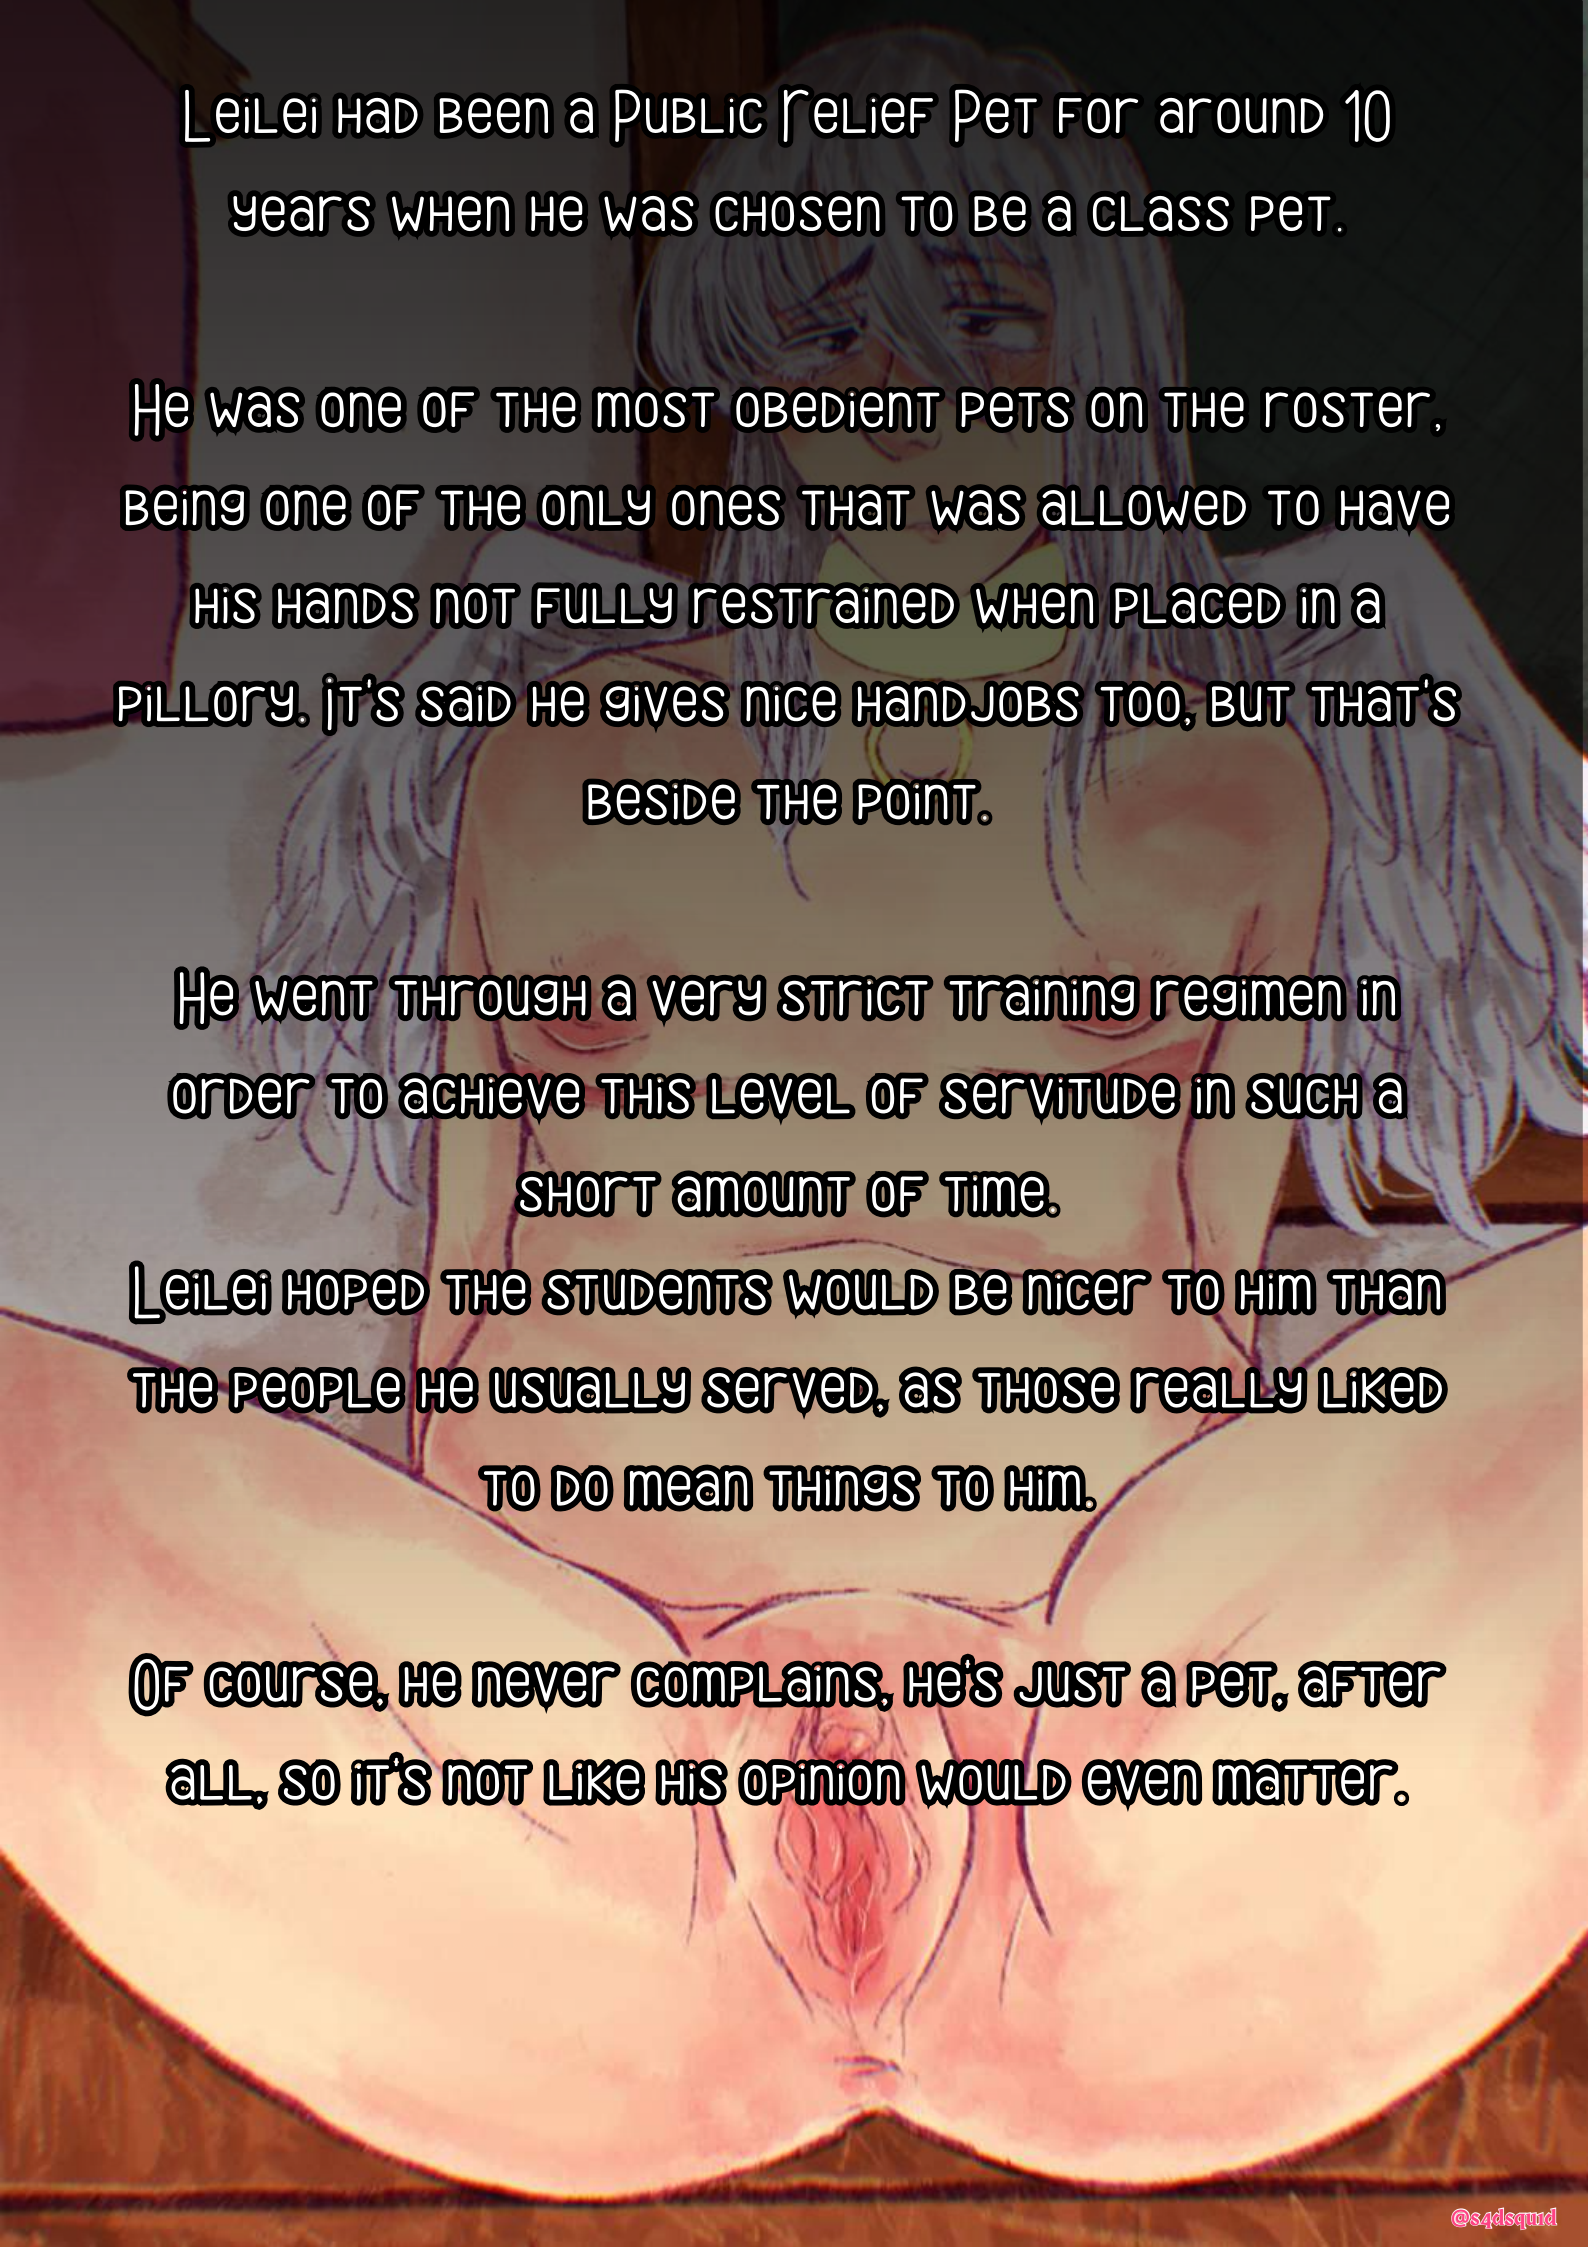

In theory, yes, but his collar is set to block out speech. You won't be able to change those settings now, so don't worry about it.

Woah, so that's what a pet looks like up close?

Isn't he a bit tiny? I thought pets would be at least a bit bigger...

I heard they can be!

Focus, you all! I'll let you ask general questions at the end!

Leilei had been a Public Relief Pet for around 10 years when he was chosen to be a class pet.

He was one of the most obedient pets on the roster, being one of the only ones that was allowed to have his hands not fully restrained when placed in a pillory. It's said he gives nice handjobs too, but that's beside the point.

He went through a very strict training regimen in order to achieve this level of servitude in such a short amount of time.

Leilei hoped the students would be nicer to him than the people he usually served, as those really liked to do mean things to him.

Of course, he never complains, he's just a pet, after all, so it's not like his opinion would even matter.

This area here is what is commonly referred to as their 'pet parts'. It consists of their anus, vulva, vaginal canal and clitoris.

The clitoris is usually much larger on males, sometimes even resembling a tiny penis. Some of them even have small spikes. Those can show on the skin that covers it, also known as 'hood', or on the clitoris itself.

Does anyone know any other sex indicator pet angels have?

Uhm... girl pets have boobs?

Yes, you're correct. Female angels usually have breasts even before bearing children. Males typically only develop those if they get pregnant.

They also tend to have markings on their chests. Just don't forget those things aren't as rigid as it seems here. Angels choose what sex they'll be listed as in documents upon reaching 20 years of age and entering the draft, so refer to a pet's documentation to find out their sex, in order to avoid mistakes.

Also please remember that while their anatomy may be similar, regular angels are different from pets! Regular angels are actually people and have souls, feelings and everything else, just like you all.

wait, pets really don't have souls?? i thought it was a metaphor or something...

A PET'S VULVA HAS A LOT OF FOLDS, SPREADING IT OPEN makes it easier to view individual parts.

THE BIGGER HOLE AT THE BOTTOM IS THE ENTRANCE TO THEIR VAGINAL CANAL, THE TINY ONE RIGHT ABOVE IS THEIR URETHRA, IT'S THERE THEIR PEE COMES OUT OF.

THESE ARE PROTECTED BY THE INNER AND OUTER LABIA, BOTH OF WHICH I'M SPREADING RIGHT NOW.

IT'S IMPORTANT TO KEEP YOUR PET'S VULVA CLEAN, THAT INCLUDES IN BETWEEN ALL THE FOLDS AND INSIDE THE HOOD OF THE CLITORIS. WHILE PETS DO HAVE A NATURAL SMELL, IF YOU DON'T DO IT PROPERLY, THEY MIGHT START SMELLING QUITE BADLY, KINDA LIKE RANCID PEE.

THE CLITORIS SITS ABOVE EVERYTHING ELSE, IT MAY OR MAY NOT STICK OUT, USUALLY, THE INNER LABIA SEEMS TO COME FROM IT WHILE THE OUTER SEEMS TO ENVELOP IT.

TECHNICALLY, THE INSIDE OF THEIR VAGINAS IS SELF-CLEANING, BUT SOME PEOPLE LIKE TO ALSO CLEAN IT FOR EXTRA CLEANLINESS OR TO JUST BLOCK OUT THEIR NATURAL SMELL.

CLEANING IS USUALLY DONE WITH A SPECIAL SOAP AND A BRUSH NOT TOO DIFFERENT FROM A TOOTHBRUSH, SOME LIKE A PET'S NATURAL SMELL THOUGH, SO THEY ONLY CLEAN IT WITH WATER. IT'S UP TO THEIR OWNER TO DECIDE.

PUBLIC RELIEF PETS LIKE LEILEI GET USED BY MANY PEOPLE EVERY DAY, SO THEY ACTUALLY GO THROUGH DEEP CLEANING, IT TYPICALLY USES A BIGGER, MORE BRITTLE BRUSH AND STRONGER PRODUCT, BUT THIS DOES NOT TO BE DONE FOR PERSONAL PETS

AND THIS PART IS A PET'S ANUS,  
IT CAN BE USED FOR SEXUAL PURPOSES  
JUST LIKE THEIR VAGINAL CANAL. IN FACT,  
SOME PEOPLE PREFER USING THAT  
INSTEAD AND WILL KEEP THEIR VAGINAS  
FOR BREEDING PURPOSES ONLY.

HOWEVER, IT DOES NOT  
HAVE NATURAL LUBRICATION  
AND MOST PETS TEND TO  
REACT BADLY THE FIRST  
TIMES THEIR OWNERS  
INSERT ANYTHING IN THEIR  
ANUSES, SO IT'S IMPORTANT  
TO BE CAREFUL IF YOU  
WANT YOUR PET TO LIKE  
YOU.

UNLESS OF COURSE, YOU DON'T  
CARE ABOUT THAT. SOME PEOPLE  
DON'T, AND THAT'S OK.

OF COURSE, LEILEI BEING A  
PPP, HE IS QUITE USED TO IT,  
SO FEEL FREE TO  
EXPERIMENT WITH IT WHEN  
TAKING CARE OF HIM,

THE ANUS IS ALSO WHERE THEY  
TYPICALLY GET ALL OF THEIR  
NUTRITION FROM. IT COMES IN THE  
FORM OF 'PET FOOD'.

WELL, SOME PEOPLE DO FEED THEIR PETS  
REGULAR FOOD, BUT THIS MAKES THEM  
NEED TO POOP, WHICH IS NOT IDEAL, AS  
IT'S QUITE SMELLY AND IT'S HARD TO  
TRAIN A PET TO ONLY DO IT IN A CERTAIN  
PLACE LIKE YOU WOULD A CAT. SO MOST  
PEOPLE JUST STICK TO PET FOOD.

IS HE GETTING...WET?

I THINK SO, YEA...

DON'T WORRY, I READ SOMEWHERE THAT'S A GOOD THING!!

You must remember though, most  
pets' digestive systems get very  
atrophied due to not being  
allowed to ingest any food.

Letting a pet with an  
atrophied stomach eat  
regular food is very  
dangerous and can even lead  
to death in extreme cases.

That's why it's much safer to  
remove it. It's typically taken out  
via a simple surgery that can be  
done by most vets. It leaves only a  
part of their intestines connecting  
straight to their esophagus.

That way, if they accidentally  
ingest something they should,  
or if you want to give them a  
small treat, it will just pass  
through and they'll expel it  
eventually.

Anyway, this is how pet food  
looks. It's a gel that must be  
administered with a syringe  
directly to their anus.

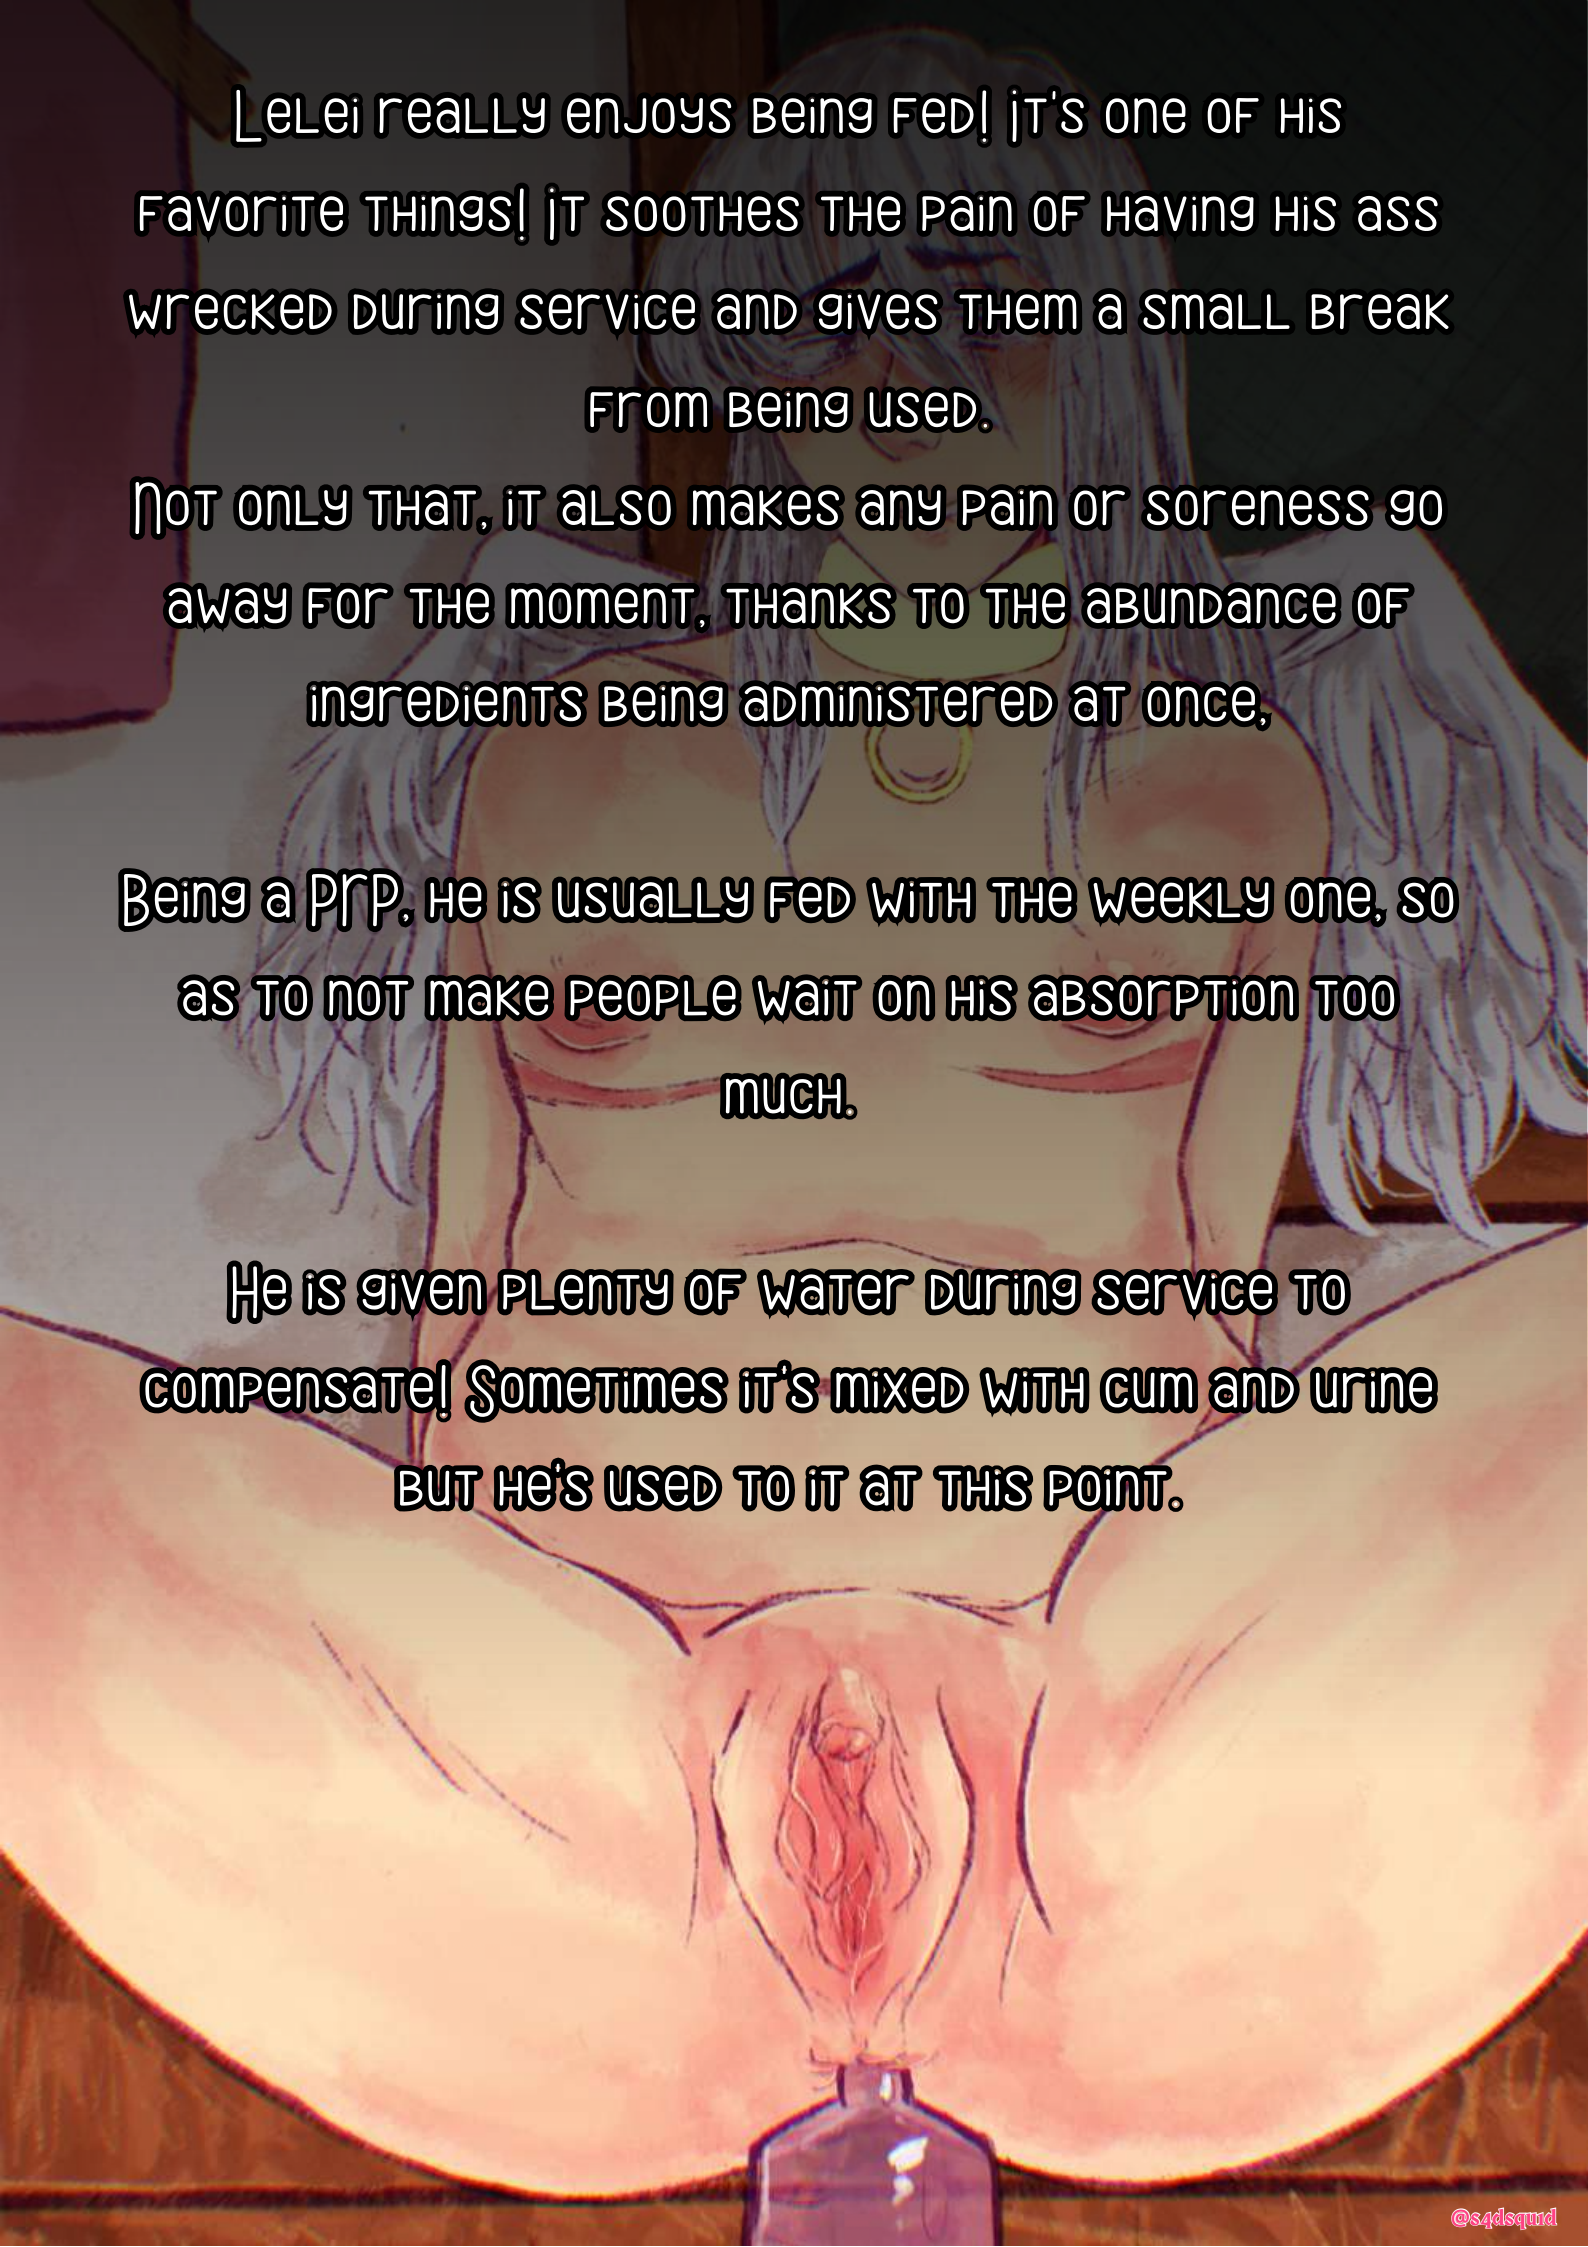

It needs to be kept refrigerated, so it might spook your pet a little in the beginning due to the sudden cold, but most of them usually end up liking being fed.

Dosage and frequency of feeding will vary depending on the brand and type of food.

Some have enough hydration that makes it so a pet won't even need to drink water, but usually need to be injected multiple times a day.

Some are so packed with nutrients that you only need to feed them once a week.

The most common one is a daily dose with a little bit of water mixed in, so your pet still needs to drink water, but not as much.

Lelei really enjoys being fed! It's one of his favorite things! It soothes the pain of having his ass wrecked during service and gives them a small break from being used.

Not only that, it also makes any pain or soreness go away for the moment, thanks to the abundance of ingredients being administered at once.

Being a PRP, he is usually fed with the weekly one, so as to not make people wait on his absorption too much.

He is given plenty of water during service to compensate! Sometimes it's mixed with cum and urine but he's used to it at this point.

No matter what type you use  
though, all of them are at  
least a bit liquid and can  
easily slide off a pet's anus,

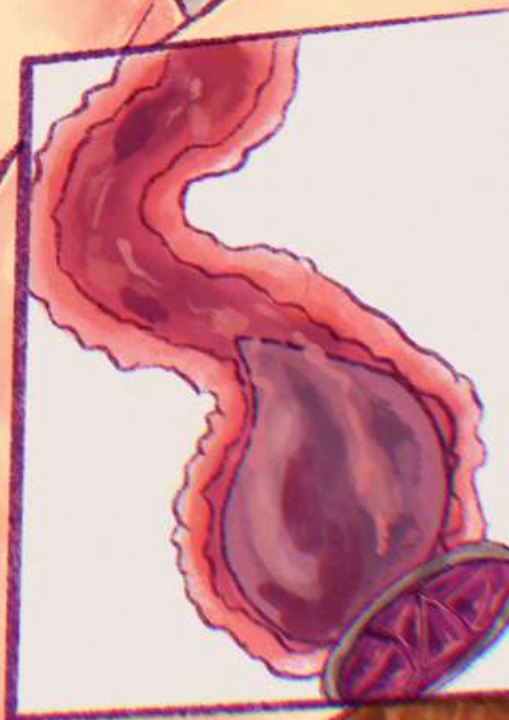

That's why it's  
important to plug  
them up.

This will ensure all of the  
contents are absorbed by their  
body. The absorption time will  
be written on the packaging, so  
pay attention to it.

This one is a 'quick  
absorption type' so it only  
takes 30 minutes! The  
downside to it is that it  
requires two daily doses  
instead of just one.

How are you even supposed  
to pick the 'right' food?

You have to weigh the pros and  
cons of each type of food before  
picking one for your pet. First and  
foremost, it needs to be  
compatible with your lifestyle.

I heard some of you whispering about it earlier, so

I guess I this is a good time to explain,

See how when I spread him open

now it's sticky?

This is how it looks like

when a pet is self-lubricating, or, in more common terms, 'wet'

It's a positive response to stimuli, and

a good way to gauge if your pet likes

a certain type of touch or handling.

There's a common saying that

says "a happy pet is a leaky pet".

That's what it's referring to.

Leilei is very sensitive so he gets wet very easily.

That's usually the case with well trained, docile pets.

Pets who have gone numb usually lose this ability and might need artificial lube in order to be used.

So, pets do like to be used?  
It's not like...bad for them, right??

Of course they like it! See, this is why we limit your internet access!

Don't be swayed by those 'pet activism' weirdos propaganda.

New ones might complain or look like they don't but it's just a disconnect from their true nature. It's a side effect of being forced to live like regular people for the first 20 years of their lives. These reactions go away if they are properly trained!

If you truly want to know how a pet really feels about something, check their vulva. If it's wet, it means they do!

This is a pet's urethra,

its main function is to expel pee from their bodies, although some people like to use it to fill their bladder with liquid as a sort of training,

There are stingy liquids that cause constant pain, there are neutral ones that just constantly give them the sensation of fullness and the ones that have stimulants and heightens sensitivity.

Those are important training tools, but they'll be discussed more in depth in another class, for now we'll focus on how to manage their waste.

Uhm...teacher?  
How do we put the liquid in?

Ah, good question! We will get to it soon, as it's also a part of waste management too.

See how the pee naturally flows out once the catheter is inserted?

This makes the pet unable to control their muscles and all the urine is forced out.

Before we proceed, I need to explain some more things.

Some people prefer to train their pets to always pee on 'pet pads'. While it's doable and much easier to train than for solid waste, it's quite hard to do and most times, you'll need the help of a professional trainer.

It's only really recommended if you are away from your house most of the day and really don't have time to manually empty them.

Can't we just put them in diapers?

If you're willing to deal with all the extra cleaning their vulva will need, yea, it's also a possibility.

Won't they pee by themselves when their owner is away though?

Oh, we'll get to that, don't worry!

As your colleague cleverly pointed out, just forcing a pet's urine out does not fully solve the problem.

That's where this little contraption comes in handy! It's attached to the bladder and is supposed to be fixed there.

At the end of the tube, there's a cap you can close. This way, no urine will leak out of the pet until you open the cap. It gives the owner full control of the pet's bladder! And yes, you can also easily inject liquids through it.

This is a very popular device for personal pets and is default for public relief pets. It's semi-permanent and requires little maintenance.

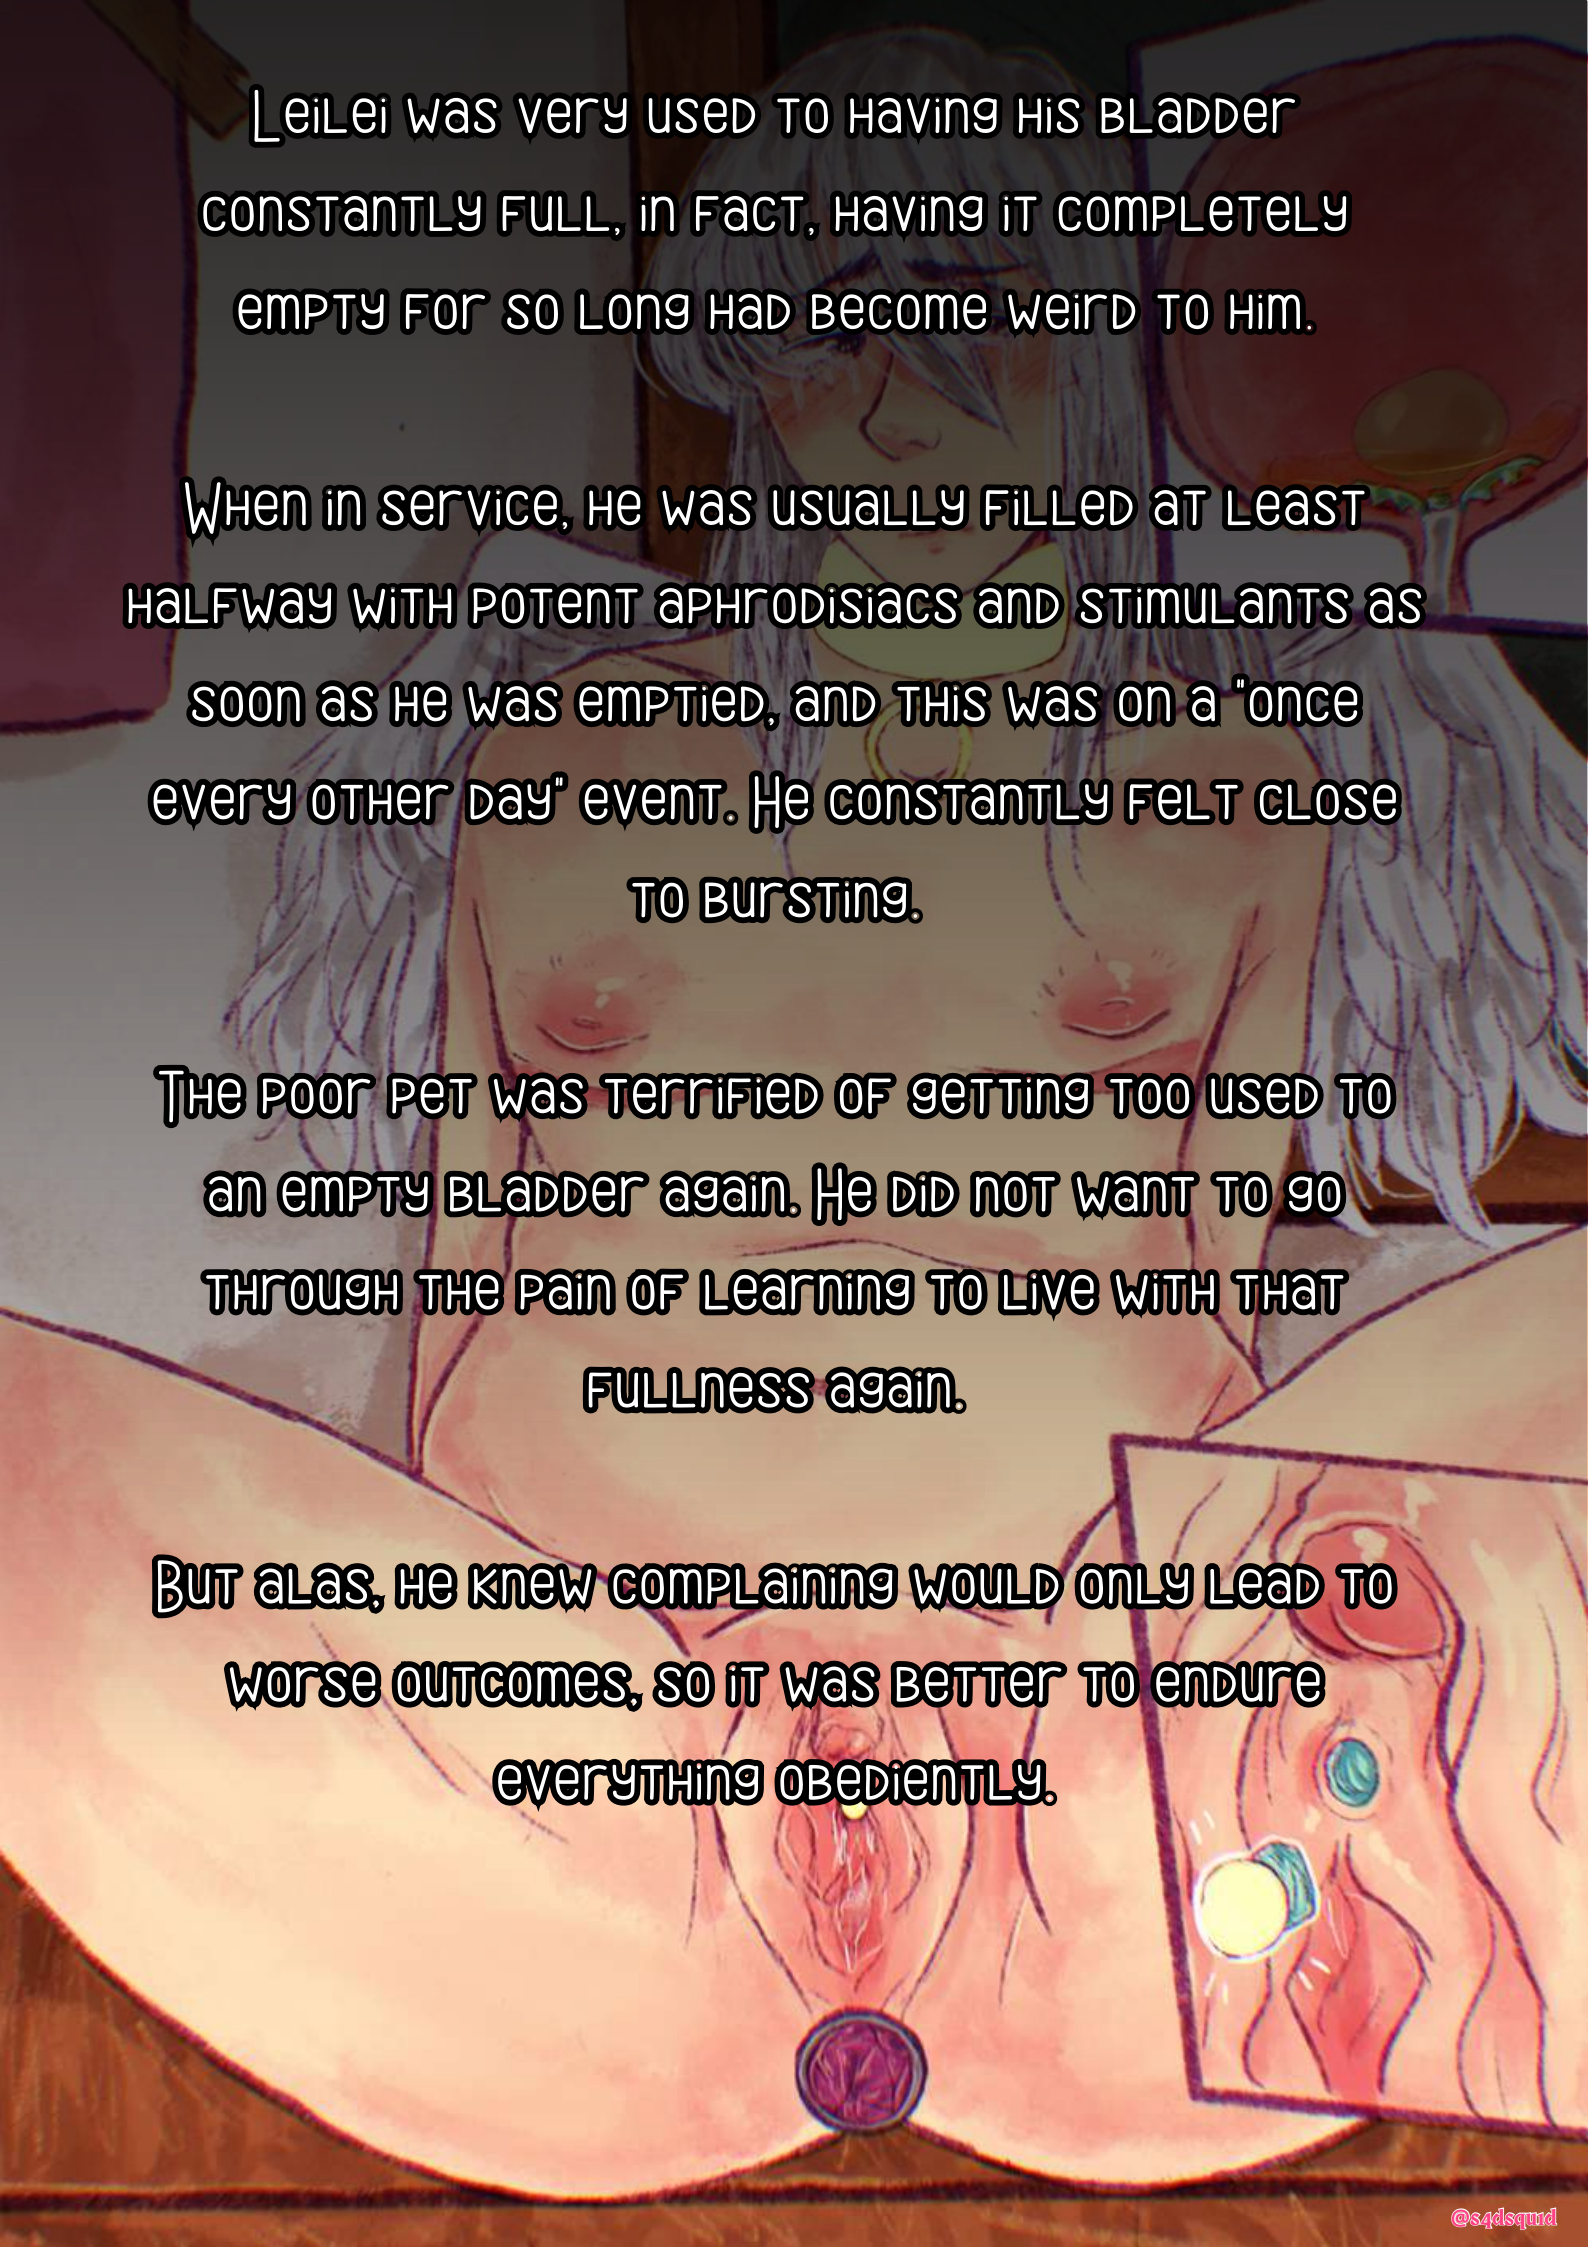

In fact, Leilei had one before, it was just taken out so I could show you how it's put in. Be aware that it cannot be safely removed without the aid of a properly trained vet, so don't try it!

OF course, if you let it fill up too much it will leak around the cap, so make sure to empty them on a regular basis. If you don't want to deal with any messes.

A pet should be emptied at least once every two days if they aren't pregnant. If they are, then it should be at least daily, as the fetuses tend to press against their bladders, making it fuller much earlier.

Wait, is that really enough?  
I mean, don't people pee multiple times a day?

People do, yes. Pets will naturally get used to holding onto pee for much longer. They might be uncomfortable at first, but it's just a matter of proper training and getting used to it.

Leilei was very used to having his bladder constantly full, in fact, having it completely empty for so long had become weird to him.

When in service, he was usually filled at least halfway with potent aphrodisiacs and stimulants as soon as he was emptied, and this was on a "once every other day" event. He constantly felt close to bursting.

The poor pet was terrified of getting too used to an empty bladder again. He did not want to go through the pain of learning to live with that fullness again.

But alas, he knew complaining would only lead to worse outcomes, so it was better to endure everything obediently.

This Here is a Pet's CLITORIS,  
Other common names for it  
are CLIT, DICKLET, ETC...

It's PROTECTED BY a  
Layer OF SKIN, as I  
EXPLAINED BEFORE,  
THE WHOLE organ is  
EXTREMELY  
sensitive, BUT even  
more so under THE  
HOOD.

PLAYING WITH IT OR JUST  
TOUCHING IT IN GENERAL IS  
a GREAT WAY TO BOND  
WITH YOUR PET OR GET  
THEM READY FOR USE, AS  
IT'S SOMETHING THEY  
REALLY SEEM TO ENJOY

See HOW MUCH SLICK HE  
IS PRODUCING JUST FROM  
LIGHT TOUCHING?

You DO need to be a BIT CAREFUL THOUGH, NEW PETS  
aren't USED TO HAVING SUCH a SENSITIVE PART  
TOUCHED AND MIGHT BE OVERWHELMED OR IN PAIN IF  
you are TOO ROUGH. IT'S BEST TO START SLOW.

WHAT IF I WANT TO CAUSE PAIN? NOT  
FOR TRAINING OR ANYTHING, JUST  
BECAUSE I WANTED TO?

Then you would need to TRAIN your PET  
TO ENDURE PAIN BETTER. UNLESS OF  
COURSE, you DON'T MIND ENDING UP WITH a  
NUMB PET, BECAUSE THAT'S WHAT HAPPENS  
WHEN you OVERWHELM a PET TOO QUICKLY  
WITH NEGATIVE STIMULI.

DUDE, WHAT THE FUCK?

ARGH, SHUT UP, YOU!  
OOOOH, I SEE!!

Why would you even ask THAT...??

OF course, this sensitivity ALSO makes it a great training TOOL, if you go through a 'negative reinforcement' training route, it's an IDEAL PLACE TO INFLICT Pain and Punishment upon.

But even WITH a 'positive reinforcement' approach, it's really USEFUL TO use IT TO give THE PET rewards,

This WILL be discussed more once we GET TO THE BASICS OF PET training, BUT a PET'S COLLAR ALSO CONTROLS their ability TO cum. It's POSSIBLE TO stimulate a PET'S CLitoris FOR LONG PERIODS OF Time WITHOUT ALLOWING them any SORT OF release. This increases their SLICK PRODUCTIONS and HAS PROVEN TO be a RELIABLE training PET FOR personal PETS.

Can you keep a PET FROM cumming INDEFINETLY?

Yes, it DOES NOT HAVE a TIME LIMIT. It ALL DEPENDS on your CHOSEN training regimen and HOW you WANT your PET TO TURN OUT.

We'll go THROUGH the very BASICS another Day, BUT once you HAVE a PET, you can DO your own research and TRY TO DO IT ON your own or Hire a PROFESSIONAL Trainer!

Woah, HIS SLICK is running

DOWN HIS ASSHOLE...

THAT means HE REALLY  
LIKES THE WAND, RIGHT??

Well, Leilei just really likes when people  
play with his pet parts in general, haha  
but you're right, as i've previously  
explained, this is a sign that the pet  
is feeling pleasure!

Take a LOOK AT THIS,

THAT'S THE EXPECTED texture of  
a HEALTHY PET'S LUBRICATION.

THAT'S SO THICK!

EXACTLY. THIS IS TO PROTECT THEIR  
VAGINAL WALLS FROM BEING SCRATCHED  
BLOODY FROM A DEMON'S PENIS SPIKES.  
IF YOU TRY TO USE A PET WITHOUT IT,  
THEY'LL LIKELY BLEED OUT.

Anyway, PLEASE COME CLOSER AND TOUCH HIM IF YOU FEEL  
COMFORTABLE, IT'S BETTER IF YOU FEEL FOR YOURSELVES.

THE TEACHER INSTRUCTED THE STUDENTS TO FREELY TOUCH LEILEI, SO THEY COULD UNDERSTAND BETTER ABOUT HOW A PET WORKS. THEY ALSO GAVE THEM TOOLS TO USE AND WATCH FOR HIS REACTIONS. IT WAS AN IMPORTANT LEARNING MOMENT!

WOAH, I DIDN'T EXPECT HIS HAIR TO BE SO SOFT...

THE SKIN OF HIS WINGS IS SO VELVETY!! IT FEELS NICE!!

I THINK HE LIKES HAVING HIS NIPPLES TOUCHED?

HIS NIPPLES ARE SO PUFFY!

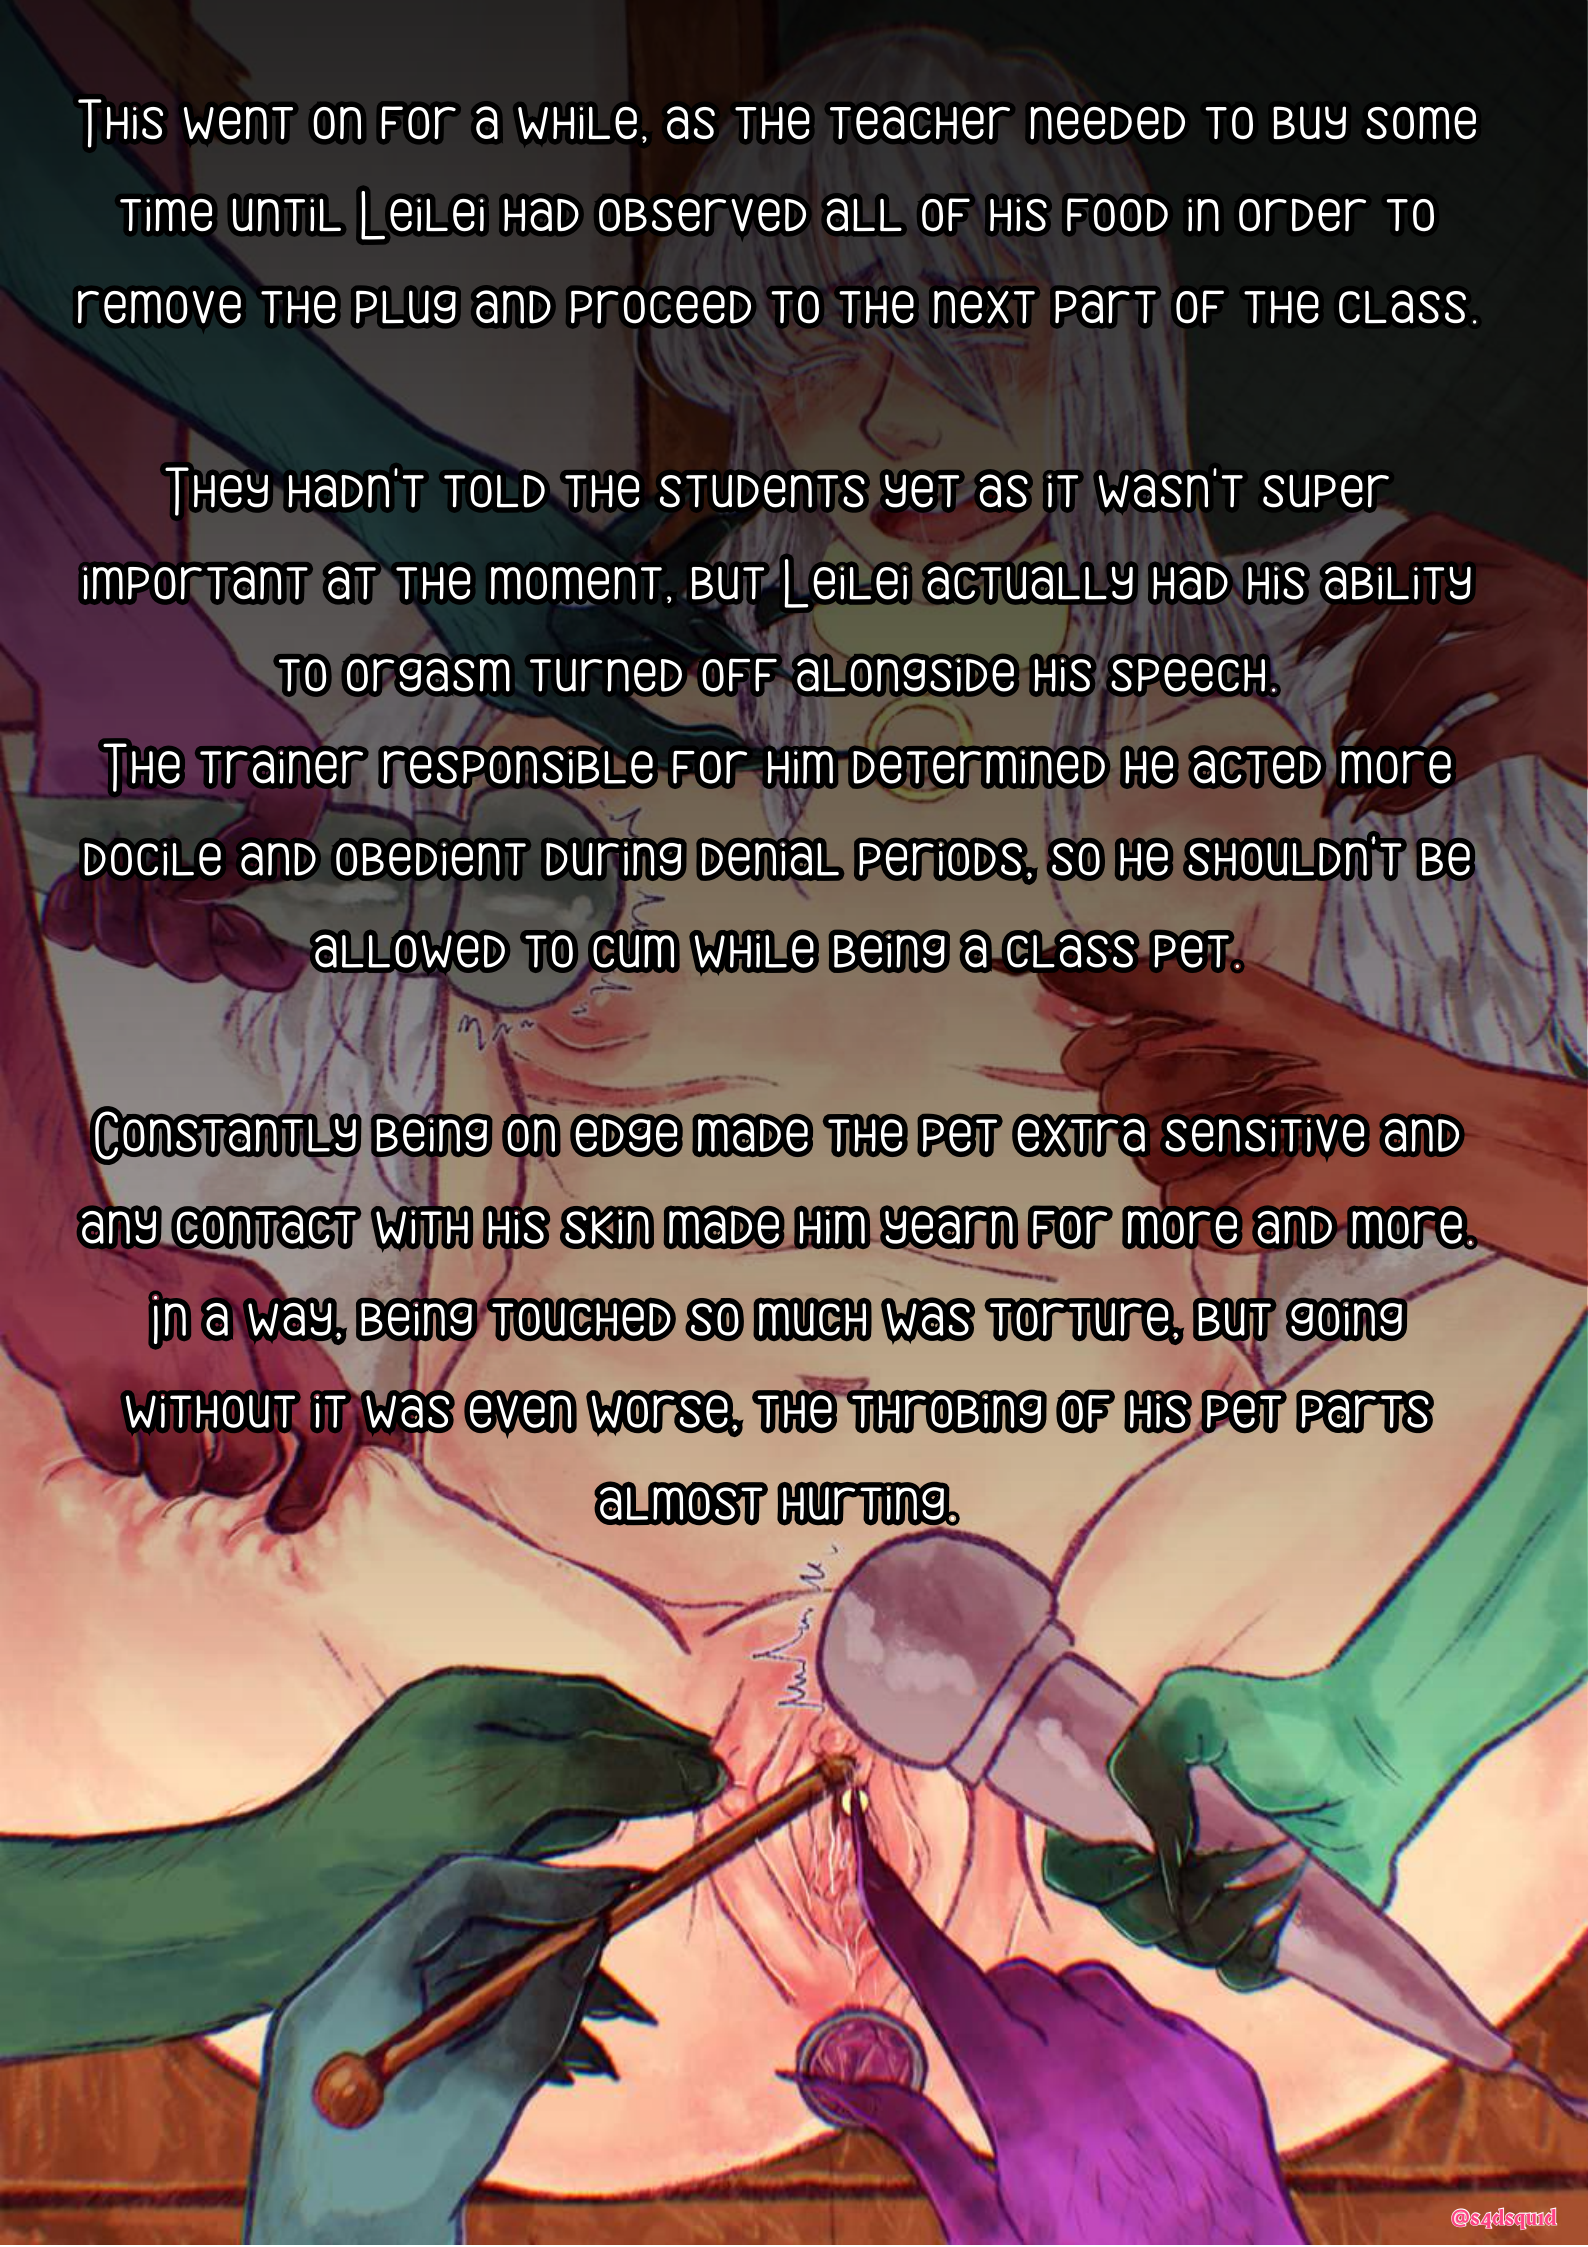

HE'S TWITCHING!! IS THAT GOOD??  
WELL, IT'S ADORABLE REGARDLESS!!

GEE, HE STARTS DRIPPING AS SOON AS I GET THE WAND CLOSE TO HIS CLIT...

OOOH, HIS LABIA STRETCHES QUITE FAR...

HIS CLIT FEELS HARDER THAN I THOUGHT IT WOULD FEEL LIKE!!

WAAH! SO SLIPPERY!

THIS WENT ON FOR A WHILE, AS THE TEACHER NEEDED TO BUY SOME TIME UNTIL LEILEI HAD OBSERVED ALL OF HIS FOOD IN ORDER TO REMOVE THE PLUG AND PROCEED TO THE NEXT PART OF THE CLASS.

THEY HADN'T TOLD THE STUDENTS YET AS IT WASN'T SUPER IMPORTANT AT THE MOMENT, BUT LEILEI ACTUALLY HAD HIS ABILITY TO ORGASM TURNED OFF ALONGSIDE HIS SPEECH.

THE TRAINER RESPONSIBLE FOR HIM DETERMINED HE ACTED MORE DOCILE AND OBEIENT DURING DENIAL PERIODS, SO HE SHOULDN'T BE ALLOWED TO CUM WHILE BEING A CLASS PET.

CONSTANTLY BEING ON EDGE MADE THE PET EXTRA SENSITIVE AND ANY CONTACT WITH HIS SKIN MADE HIM YEARN FOR MORE AND MORE.

IN A WAY, BEING TOUCHED SO MUCH WAS TORTURE, BUT GOING WITHOUT IT WAS EVEN WORSE, THE THROBING OF HIS PET PARTS ALMOST HURTING.

AFTER ALL THAT, Leilei was OVERWHELMED, OUT OF BREATH AND ON THE BRINK OF COLLAPSING FROM EXHAUSTION. AT LEAST WHEN HE WAS SERVING AS A PFP HE DIDN'T NEED TO ACTUALLY HOLD HIS OWN LEGS OPEN...

OK, OK, BACK TO YOUR SEATS EVERYONE!  
We need to resume THE CLASS!

Our CLASS PET'S ABSORPTION TIME IS NOW OVER, SO WE CAN SAFELY REMOVE THE PLUG. SOME LIQUID MIGHT STILL LEAK, BUT REST ASSURED ALL THE NUTRIENTS HAVE BEEN ABSORBED!

WELL, ACTUALLY, BEFORE WE PROCEED, DOES ANYONE WANT TO ADD ANYTHING?

IS THIS REALLY WHAT ALL PETS ARE LIKE???

ONCE PROPERLY TRAINED?  
PRETTY MUCH, YEAH.

THIS IS A PET'S VAGINA, VAGINAL CANAL OR BIRTH CANAL! WE ARE USING A SPECULUM TO KEEP IT OPEN SO YOU ALL CAN SEE IT WELL.

Does THIS HURT??

NOT REALLY. IT MIGHT FOR A VERY INEXPERIENCED PET, BUT FOR THE AVERAGE ONE IT'S COMPLETELY PAINLESS

Can we take pictures? For future reference, I mean...

Sure. JUST TURN OFF THE SHUTTER SOUND. I DON'T WANT INTERRUPTIONS.

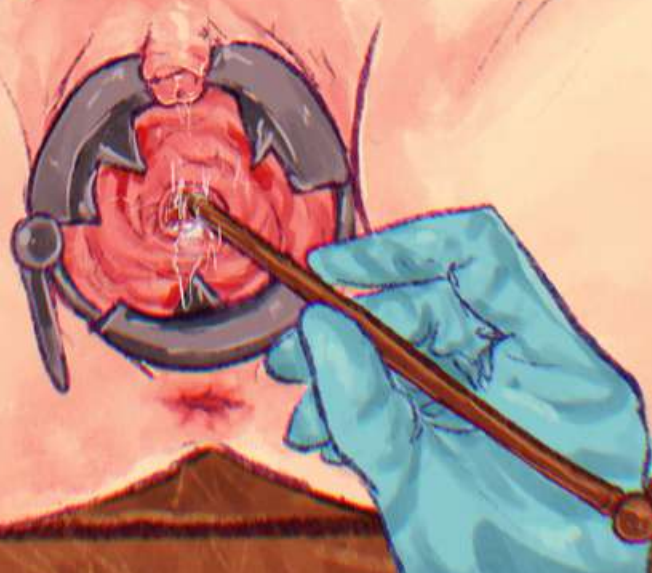

Anyway, THIS IS THE FIRST PART WHERE A DEMON INSERTS THEIR PENIS IN ORDER TO MATE WITH A PET.

THESE WALLS ARE MADE OF VERY STRONG MUSCLES THAT EXPAND WHEN A PET IS AROUSED. THEY CAN ALSO MOVE IT ON THEIR OWN TO SOME DEGREE, SO SOME PETS, LIKE LEILEI, ARE TRAINED TO CLENCH AND UNCLENCH IN QUICK SUCCESSION WHEN BEING USED, TO MASSAGE THE PENIS INSIDE OF THEM. THIS IS AN ADVANCED TECHNIQUE THOUGH, NOT ALL PETS ARE CAPABLE OF IT.

THIS SMALL HOLE HERE IS A PET'S CERVIX. LEILEI ISN'T A VIRGIN, SO IT'S QUITE LOOSE, AS IT SHOULD BE. A CHEMICAL REACTION TO A DEMON'S SEMEN IS WHAT PERMANENTLY SOFTENS THE MUSCLE AFTER BEING PENETRATED AND BRED FOR THE FIRST TIME.

YES, A PET'S FIRST INTERCOURSE IS QUITE PAINFUL, AS THEIR CERVIX IS COMPLETELY CLOSED AT THAT TIME, BUT WITH ENOUGH PREPARATION, IT SHOULDN'T FEEL PAINFUL AFTER THAT ANYMORE.

THIS RING OF MUSCLE PROVIDES ACCESS TO A PET'S UTERUS AND IT'S IMPORTANT THAT THE PENIS PASSES THROUGH IT. IT'S QUITE TIGHT, AND MAY FEEL A BIT WEIRD IF YOU AREN'T EXPECTING IT.

Now let's take a look at a pet's most important part, their womb! We'll use a second speculum for that.

This one can actually be a bit uncomfortable but Leilei is a very good pet, so he'll endure it for us, won't he??

\*NODS NODS\*

Can you all see it? This is a pet's uterus! If he was pregnant this is where the baby demon or angel would be.

Wait, wait! You said the penis goes all the way in! Can they even be used while carrying?

Up until 20 weeks or so, yea, it's no problem! Fetuses are enveloped in both a physical and magical barrier that prevent them from being harmed in any way. It's the reason why performing an abortion is a futile effort.

After the aforementioned 20 or so week period, the magic barrier completely closes off the womb, making penetration impossible.

Anyway, during this period, if you want to use your pet, you should use their anus, mouth or any other part!

Moving onto the next subject.

# How to successfully breed a pet!

There's actually no big mystery to it, you just need to make sure your knot is inside the pet's canal once it expands

The picture i'm showing on the electronic board shows how a pet's reproductive system should look when being fully knotted.

Keep in mind that once you knot them, you will be stuck together until the swelling starts to go down, which can take from 10 to 15 minutes

Do not attempt to force yourself out! It may not only hurt your pet, causing an uterine prolapse, but also interfere with the chances of successful impregnation!!

Is he wet all the way inside??? That's kinda cute...

ANOTHER THING! WHILE PETS DO NOT HAVE THE ABILITY TO VOLUNTARILY CONTRACT THE MUSCLES OF THEIR WOMB, IT DOES ALSO CLENCHES AND UNCLENCHES WITH AROUSAL!

SEE HOW MUCH HE IS TWITCHING JUST FROM A LITTLE STIMULI?

OH...IS THAT WHY SOME PEOPLE SAY TRAINED PETS "FEEL BETTER"?

Yes, actually! A PET WHO ENJOYS BEING USED WILL ACCEPT PENETRATION BETTER AND THEIR BODY WILL ALSO RESPOND ACCORDINGLY!

THINGS ARE MUCH SMOOTHER ONCE A PET HAS LEARNED ITS TRUE NATURE. SOME OWNERS DON'T REALLY CARE ABOUT IT, BUT AT THE END OF THE DAY, IT'S THEIR LOSS...

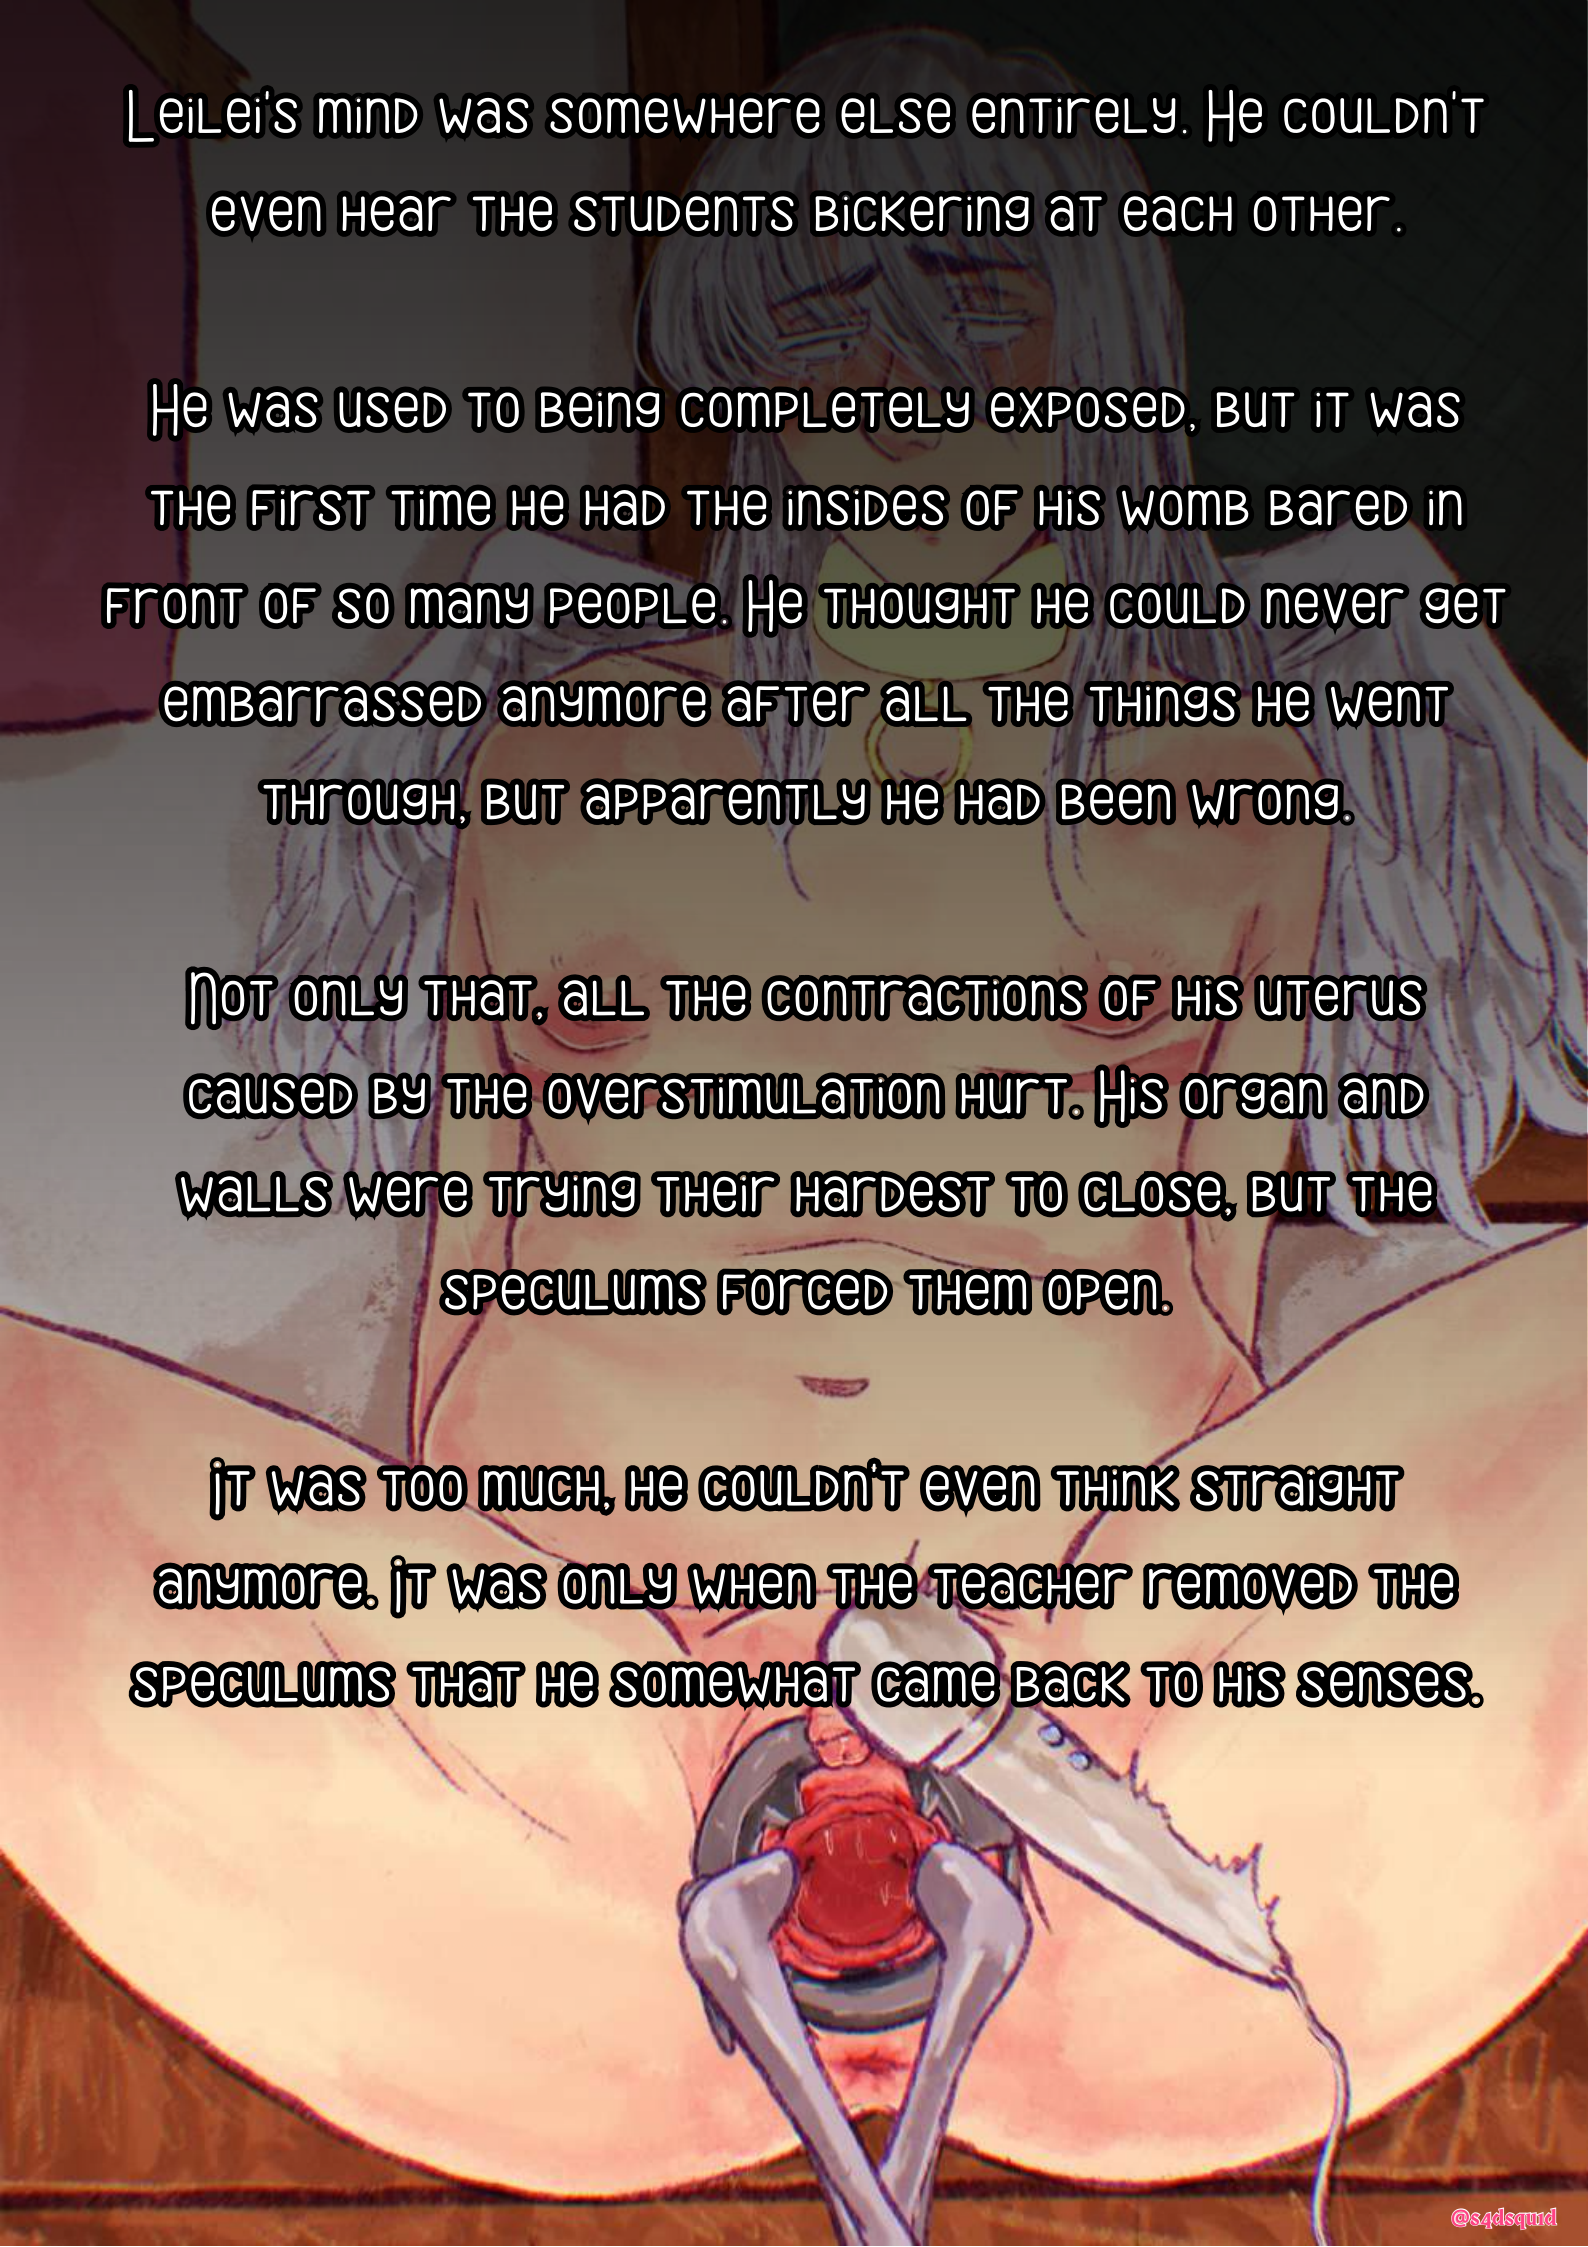

THAT'S YOUR OPINION! SOME PEOPLE DO PREFER NUMB PETS!!

WELL, some PEOPLE LIKE EATING SHIT!

Yeah, STOP LISTENING TO YOUR MOM, SHE'S CREEPY AND UNHINGED...

SILENCE,  
ALL OF  
YOU!!

YOUR DAD IS CREEPY AND UNHINGED!!!

Leilei's mind was somewhere else entirely. He couldn't even hear the students bickering at each other.

He was used to being completely exposed, but it was the first time he had the insides of his womb bared in front of so many people. He thought he could never get embarrassed anymore after all the things he went through, but apparently he had been wrong.

Not only that, all the contractions of his uterus caused by the overstimulation hurt. His organ and walls were trying their hardest to close, but the speculums forced them open.

It was too much, he couldn't even think straight anymore. It was only when the teacher removed the speculums that he somewhat came back to his senses.

There, there,  
Feeling better?

Teacher? What happened?

He spaced out a  
bit, probably just  
overstimulation,  
he's fine now,  
don't worry,

\*nods\*  
\*nods\*  
\*nods\*

if this happens while he's in your  
care, just take out some of the  
sources of stimuli. Or push him  
further if you like, the worst  
that could happen is him fainting.  
He is a PRP, he probably endured  
much worse than whatever you  
might think of doing,

isn't that a bit...cruel?

He's a pet, Mariel, he's not only used  
to it, but was trained specifically  
for that. He'll be fine!

You can't apply the same rules to  
pets as you do to people, you know?  
You'll learn it soon enough,

Anyway, let's go to the part of the class!

Now Leilei, I need you to change positions. Yeah, move your ass up, spread your legs...

\*nod\*

Great! Hold that position! Good boy, Leilei!

DID HIS CLIT TWITCH FROM BEING PRAISED?????

...I DIDN'T KNOW PETS COULD BE THIS CUTE...

Well, most pets like being praised! It's a way for them to know they are doing their job well, after all!

Anyway, in this class you'll also get to see a pet's pregnancy from start to finish! Of course, since none of you are of age to become parents, we will do artificial insemination. This will also ensure there are no accidental pregnancies when you use him.

THE FIRST STEP TO IMPREGNATING A

PET IS INDUCING OVULATION,

A PET OVULATES WHEN SEMEN GOES ALL THE WAY TO THEIR OVARIES, INDUCING IT. THIS IS WHY IT'S IMPORTANT TO KNOT THEM PROPERLY WHEN MATING, SO THEY'LL BE PROPERLY FILLED.

IT TAKES FROM 10 TO 36 HOURS FOR FECUNDATION TO OCCUR AND THE ZYGOTE TO STICK TO THEIR UTERINE WALLS. UNTIL THEN, EACH NEW USE MAY INDUCE NEW OVULATIONS, WHICH WILL RESULT IN MULTIPLE FETUSES.

YOU MUST TAKE INTO ACCOUNT YOUR PET'S SIZE WHEN DECIDING HOW MANY BABIES TO GET INTO THEM. DO NOT GO OVERBOARD, AS A PREGNANCY TOO BIG CAN BE DEADLY TO BOTH THE PET AND ANY FETUSES THEY ARE CARRYING.

Leilei is quite small, so inducing more than one ovulation on him is not recommended, as sometimes the embryos may multiply by themselves,

Since this is artificial ovulation, we just need to fill his womb once and wait.

This is semen from the same source of donors used to impregnate milk farm pets, which means, if everything goes well, he will likely end up expecting a single angel.

Angels are much smaller and easier to gestate and give birth to than demons,

As you know, most male demons will get a pet pregnant with more demons, while female demons will get pregnant with angels. It's not a black and white rule and some variations can occur!

OF course, now THAT HE'S FILLED ALL THE WAY WE NEED TO PLUG HIM!  
THIS device SIMULATES A KNOT AND MAKES SURE HE REMAINS FULL  
UNTIL INSEMINATION IS COMPLETE,

A LITTLE BIT OF LEAKING IS NORMAL WHEN  
USING A DEVICE LIKE THAT, USUALLY AS A  
RESULT OF OVERFILLING,  
LEAKING HOWEVER IS NOT  
NORMAL WHEN DONE THE  
NATURAL WAY, UNDERSTOOD??

Uhm... teacher??

Has HE BEEN PREGNANT BEFORE??

OF course! He's a PFP, he gets  
pregnant almost every year.

DIDN'T YOU SAY THEY GROW BOOBS WHEN THEY  
GET PREGNANT?? HE DOESN'T HAVE THEM!

OH! MOST PETS THAT AREN'T USED FOR MILK HAVE THEIR  
ENLARGED BREASTS REMOVED AFTER BIRTH. THEY JUST  
HEAL BACK TO HOW THEY WERE BEFORE PREGNANCY!

OK, now we just need to wait 15 minutes!

Do any of you know why we must wait this exact amount of time?

That's how long it takes for a knot to deflate naturally!!

Precisely!

Does anyone have any questions while we wait?

Are there any limits to what we can do once we are responsible for his care?

Well, you can't kill or permanently harm him in any way. As a reminder, angels can't regenerate brain cells, remember? That means no messing with his breathing or causing damage to his skull,

You also won't be able to tweak his collar settings, but it's hard locked so you wouldn't be able to even if you tried.

So...we can spank him!!

AFTER THE TIME WAS UP, Leilei WAS CLEANED UP AND MADE TO SIT DOWN AGAIN. HE WOULD BE KEPT IN THE CLASS AND UNDER TEACHER SUPERVISION UNTIL THE PREGNANCY WAS 100% CONFIRMED.

CLASS IS OVER FOR NOW! YOU CAN STAY AND PLAY WITH HIM UNDER SUPERVISION IF YOU'D LIKE, THOUGH!

AFTER THAT, HE WOULD SPEND EACH WEEK DAY WITH EACH STUDENT IN A PERMANENT ROTATION. ON THAT DAY THEY WOULD BE RESPONSIBLE FOR HIS CARE AND WOULD HAVE FREE REIGN TO DECIDE HOW AND IF TO USE HIM. THERE WOULD BE SOME LEVEL OF TEACHER SUPERVISION, BUT HE'D ALSO SPEND SOME TIME ALONE WITH THE STUDENTS SO THEY'D BE ABLE TO GET A FEEL FOR HOW IT FEELS TO HAVE A PET.

REMEMBER, THE ORDER IN WHICH YOU'LL GET TO BE RESPONSIBLE FOR HIM IS ALPHABETICAL. DON'T HESITATE TO REACH OUT IF YOU HAVE ANY DOUBTS OR DIFFICULTIES. YOU'RE HERE TO LEARN, AFTER ALL!!!

ON WEEKENDS HE WOULD REMAIN IN THE CLASSROOM, WHERE THE STUDENTS ALL WOULD BE RESPONSIBLE AT ONCE. IN A SENSE, IT WOULD BE SIMILAR TO HIS ROLE AS A PUBLIC RELIEF PET.

# THANK YOU FOR READING!

Part 2 will come eventually!!

small extra on the next page:

# PET PREGNANCY ANATOMY

pet should rest at this stage

milk production has started, nipple and aureola gets darker

babies might put pressure on their lungs, making it harder to breathe

most pets will experience some sort of incontinence at this point

due date

breasts swell in preparation for milk production

increased belly size may make movement harder for most pets

will need to pee more often due to the fetuses constricting the bladder.

around 25 weeks (6/7 months)

most male pets don't have a lot of breast tissue before pregnancy. this does not affect milk production though.

not pregnant

# PET PREGNANCY ANATOMY (XRAY)

angels are usually born without much issue, but due to how big demons are, it's almost impossible for the birth to happen without significant tearing on the pet's birth canal

fetuses are enveloped in an egg-like sack, its colors can vary and depends on genetics.

most pets have their stomach and small intestines taken out, which leaves more space for their fetuses to develop

pets with low regeneration levels may need veterinary assistance to fix tearing post-birth

angel fetuses are half the size of demon fetuses. this pet is carrying one of each.

due date

around 25 weeks (6/7 months)

not pregnant
