LENORA THE ELF

ALL CHARACTERS ARE CONSENTING ADULT ACTORS PLAYING A ROLE

PLANT PREG SET

Everything on this book is 100% fictional, no living being (human or otherwise) was harmed when drawing or writing these situations. All characters are over 18 and none of them are based off any real person. Do not ever try to reproduce any of the things depicted on this page in real life. The immoral acts and/or dialogue of these fictional characters are not a representation of the author's actual beliefs.

IF YOU THINK ANY OF THE THEMES DESCRIBED BELOW WILL CAUSE YOU ANY LEVEL OF DISTRESS, PLEASE DO NOT READ IT

CONTENT WARNINGS:

Fictional depictions of:

Plant tentacles | Thorny tentacles | FPreg | Boob preg | Breast expansion | Birth of maggot-like creatures | mindbreak

A comic-style illustration of a purple-haired elf with large breasts and a green thorny vine. The elf has purple hair in pigtails, purple eyes, and pointed ears. She is looking at a large, green, thorny vine that is wrapped around her body. The background is a textured purple and pink. The artist's signature 'SYBSQUID' is visible on the left side.

Ooh, look at these!

It seems I've finally found what I was looking for!

A deep green shade and full of thorns, just the way it was described in those books!

Their behavior seems consistent with the written descriptions as well.

As soon as I wandered into their cave, it was a matter of seconds before I was strung up and, hopefully, ready to be turned into their seedbed!

Amazing!!

Oooh, if i'm not mistaken, this combination of vine girth and type of flower-head is the very one the Abyss Plant uses for reproduction!

Aaaah!!!

That means they really do intend to use me as a seedbed after all!!!

SYBSQUID

Things are going perfectly as planned!

I can barely contain my excitement!!

If everything goes right, I will be the first researcher to experience this plant's mating practices first hand and come back with a mind intact enough to actually publish my findings.

Oooh, I wonder if it can detect my feelings of anticipation?

Is that why it keeps teasing me so much??

I want it to use my womb already!!!

Or...

Perhaps making their hosts lubricate themselves properly helps with mating?

Maybe this is part of its mind-breaking techniques?

Aaah!

So many possibilities!

Oooh? those tiny vines...

Could they be...?

Some books discuss the existence of extremely thin vines that, supposedly, are used to modify and use a host's breasts for mating, just like they would their wombs.

But no one has ever been able to confirm or deny the veracity of these claims!

It's said to be something so exceedingly rare that most scholars even doubt the very existence of this phenomenon.

Could it be that it really chose me for this???

54BSQUID

AAAAAH, YES!!

It's in, it's finally in!!!

The spikes don't even hurt!!

Just as expected!!

It's putting its seeds inside my womb!!!

I'm finally turning into a seedbed for an Abyss Plant!!!

And the seeds!!

Oh, gosh, the seeds!!!

They feel amazing!!!

I'm cumming every time one enters my womb!!!

I bet that's how they break the minds of their hosts, it has to be!

Aaaaaaah! At this point, my own mind is going to break!!

No wonder so many that are turned into seedbeds never want to leave the cave!!!

This is heaven!!!

SYBSQUID

Oooh??

What
are
these!?

I have never
even read of
these types
of vines or
flower-
heads!!!

Aaaah, is this what will really turn my breasts
into proper seedbeds??

S4/Squid
It seems the books were not fully right about which
type of appendage was responsible for this process.

My theory is that the thin ones' job is probably just preparing the host's
breasts for the transformation, while these must actually do the heavy lifting.

And what a good job they do...

My breasts have already doubled in size and I
already feel the seeds being squeezed into them!!

Abyss
Plants are
truly
amazing!

Damn, I'm so full!!!

**I feel
dangerously
close to
bursting!!**

**It's not in the
plant's best
interests that its
host and seedbed
die or end up
severely harmed,
so I know I am
safe!**

**And I still have the amazing regeneration powers
I got from my contract with that devil!!**

My belly and breasts feel so full and hot...

I need to remember this sensation so I can write it down on my research notes!

**I'll be the first one describing the process of breast
fertilization of an abyss plant, it's a huge responsibility.**

Ooh??

Is it
done??
?

Already??

Aww, what a shame!

I was
feeling
so
good!!

Woah, my nipples look like pussies!

So that is how the seeds got inside!!

It's incredible that a plant can do something
like this to a person's body so easily...

I wonder how those vines changed my
breasts' anatomy on the inside!

I absolutely can't wait to look into a mirror while spreading my
new holes with my fingers so I can take a very good look inside!

Aaaaaah!

I'm getting wet again just thinking about this...

And my belly...!

...my belly is so big as well!

I wonder how many larvae I will give birth to?

Come to think of it, the Abyss Plant has a very weird life cycle, doesn't it?

A seed that needs to be incubated inside a host so that it can then turn into larvae which then burrows into the parent cave until it turns into one of its many vines.

Very unique indeed!

Oooo
oh!?

It's the
best
sensation
in the
whole
world!!

Nothing
ever
could
compare!!

Birthing the
larva is just
as amazing
as getting
impregnated
!!

People theorize that the Abyss
Alant uses some sort of brain
altering chemical to force their
hosts to go back and become
seedbeds again, even after they
are rescued, but I now believe
that theory is nonsense!

There's no need to change
anyone's brains when you
treat your seedbeds so well!

Anyone would want
to go back!!!

When the hosts are taken from here they
aren't being rescued, they're being taken
away from happiness itself!

You'd have to be truly mind-broken to
even think of not dedicating your
whole life to being a seedbed!!

It's the absolute best thing in the world!

My first-hand research will truly revolutionize how we view this species!!

I shall publish my studies and then go back here, to live forever as a seedbed to this Abyss Plant!!

SYBSQUID

-EPILOGUE-

After a few hours away from the Abyss Plant's cave, Lenora's brain began to heal and she quickly realized what had just transpired.

She quickly figured out that the seeds and their larvae release a secretion that, when inside the host, quickly finds its way into their bloodstream and, upon reaching the brain, induce huge spikes of dopamine. It also makes it so the hosts brain will only be able to get said dopamine from them, not from anything else.

This causes an extreme addiction to said secretion, to the point that even if they are rescued, they will still want nothing more than to go back to the Abyss Plant that abducted them in the first place.

The more time in contact, the stronger the effects. If enough time passes, brain function will start to deteriorate.

All of the above effects are permanent, with no known cure.

Lenora theorizes that the plant let her go because it wanted her to publish her research with the fake initial conclusions, hoping to influence others somehow.

It couldn't have known that the elf's contract would keep her brain and her consciousness safe from damage as well as her body, after all.

Well, in the end, Lenora's publication did revolutionize the world's knowledge of the abyss plant, just not like it had wanted to. Probably!

She still wants to go back to further investigate the level of intelligence and consciousness an Abyss Plant might possess but that will be a story for another day.

THANK YOU FOR READING!

Author's note:

I know when you saw the epilogue you thought this would turn into a perma mindbreak despair ending but I fooled every single of of you UwU

I couldn't just give her a bad end though, Lenora must retain her consciousness so she can get herself in even more fucked up situations, after all!!
